Hi,Smvdu!

**Basic-round 1** will be held on Sunday, [April 27, 2019 at 21:00<sub>UTC+5.5</sub>](#).

You will be offered 6 problem with expected difficulties to compose an interesting competition for participants for beginner level.

The round will be hosted by rules of Hackerrank (extended ACM-ICPC). Thus, during the round, solutions will be judged on preliminary tests. I tried to make strong tests — just like you will be upset if many solutions fail after the contest is over. A short editorial will be given after contest gets over .

You will be given 6 problems and 27 hours to solve them. Goodies will be given only to the top 3 first year students irrespective of branch.

The problems are prepared by [Danish mushtaq bhat](#) , [Deepak singh rathore](#) and me. We hope you will enjoy the round. :P

My gratitude to [Sushil kanchi](#),[mrityunjay gautam](#) and [sandeep chauhan](#) for coordinating the round, [Alok](#) (special thanks for the help in preparing one of the tasks and helping in making test case ),[Keshaw gupta](#), [Deepak singh rathore](#) for testing, and also [kumar aditya](#) ,[Danish mushtaq bhat](#) for the idea and preparation of one of the tasks and statement verifying, and of course Hackerrank for Polygon systems.

I strongly recommend you to read the statements of ALL tasks carefully (and of course, try to solve them).

See you on Leader board [here](#)

Good luck!
